

Tools in Forensic Science Notecards

Directions:

1. With a partner, conduct research on forensic science tools which are used to analyzing evidence in forensic science procedures including:
 - Microscopes
 - Macrophotography
 - Gel electrophoresis apparatuses
 - Gas chromatographer
 - Spectroscope
 - Mass spectrometer
 - Toxicology
 - X-ray machine
 - Trajectory analysis software
2. Using your research, create a set of descriptive notecards which include the following:
 - Front of card
 - Picture of the tool
 - Name of the tool
 - Back of card
 - Types of evidence which can be analyzed with the tool
 - How the evidence is analyzed
 - What the tool is used to discover about the evidence
3. Participate in a class discussion to share your findings and be prepared to answer questions.
